

EVEREST PAUDEL

Backend Engineer (Go & Node.js)

Kathmandu, Nepal

☎ +977-9828722827 | ✉ paudeleverest09@gmail.com | 🌐 paudel.dev | 🔗 linkedin.com/in/everestp | 🐙 github.com/everestp

TECHNICAL SKILLS

Languages: Go (Golang), TypeScript, Rust, JavaScript, SQL, C/C++
Frontend: React, Next.js, HTML/CSS, Tailwind CSS
Backend & APIs: Golang, NestJS, ExpressJS, REST APIs, gRPC, WebSockets, Microservices, RabbitMQ
Databases & BaaS: PostgreSQL, Redis, MongoDB, Appwrite
Cloud & DevOps: Docker, Jenkins, Kubernetes, AWS, Git
Security & Testing: JWT, Cryptography, OWASP Top 10, Burp Suite, Replay Protection

PROJECTS

DePing.xyz | Golang, Rust, gRPC, RabbitMQ, Redis, PostgreSQL, Solana 2026

- Built a scalable **microservices** backend in **Go** to manage distributed uptime monitoring across **Rust** edge worker nodes.
- Engineered a high-throughput pipeline utilizing **Redis** scheduling, **RabbitMQ** queues, and bidirectional **gRPC** telemetry streams.
- Developed an advanced anti-cheat engine and a **Two-Packet** state machine to eliminate false alarms and power real-time **Telegram** alerts.
- Integrated **Solana Anchor** smart contracts to automate **SPL token** reward distribution and on-chain consensus validation.

Kipay.xyz | Crypto Payment Gateway, Golang, Rust, gRPC, React.js, PostgreSQL 2026

- Engineered a high-performance **crypto payment gateway** backend in **Go** using a **modular monolith** and native **net/http** for low-latency request routing.
- Developed a **Rust multi-currency verification engine** communicating with the Go backend via bidirectional **gRPC** streams for secure cryptographic transaction validation.
- Built an end-to-end **React** frontend featuring secure authentication, merchant admin controls, custom payment link generators, and stripe-grade hosted client checkouts.
- Designed structured **PostgreSQL** schemas powering settlement engines, **signed webhooks**, and real-time transaction state tracking.

BREEZO Network | Node.js, MongoDB, Socket.IO, ESP32 IoT, Solana 2026

- Served as a founding engineer, architecting the decentralized AQI monitoring backend to ingest real-time telemetry from **ESP32 IoT** sensors.
- Implemented low-latency **Socket.IO** streaming delivering sub-second sensor updates directly to dashboard clients.
- Secured IoT communication protocols using **NaCl cryptography** and strict replay protection to prevent unauthorized data injection.
- Deployed **Solana Anchor** smart contracts to manage decentralized node registration, automated **SPL token** rewards, and access control.

NID.xyz | Golang, React, TypeScript, OAuth 2.0, OIDC, PostgreSQL, Solana 2026

- Built a scalable **identity provider** in **Go** enabling handle-based authentication across connected applications.
- Engineered a secure authentication flow utilizing **OAuth 2.0**, **OpenID Connect**, and **PKCE** for application authorization.
- Developed **.nid handle** claiming and resolution with wallet-based ownership verification across **EVM** and **Solana**.
- Implemented centralized **session management** allowing users to manage connected applications and revoke active sessions from the dashboard.

EDUCATION

Institute of Science and Technology, TU
B.Sc. CSIT

2023 – 2027
Kathmandu, Nepal

Bluebird College
+2 Science

2020 – 2022
Kathmandu, Nepal
